Calendar Sync

24/7 Availability

THE CHALLENGE & THE FIX

What Appointment Setter Actually Does

This automation acts like a tireless front-desk assistant, chatting with leads over SMS or web chat, finding a time that works, and locking it into the calendar.

☰ The Problem Today

- Back-and-forth scheduling messages waste time and lose momentum
- After-hours inquiries wait until the next business day for a reply
- Front-desk staff spend hours a day just coordinating calendars
- No-show rates climb when confirmations and reminders aren't sent

⚡ The Agentra Fix

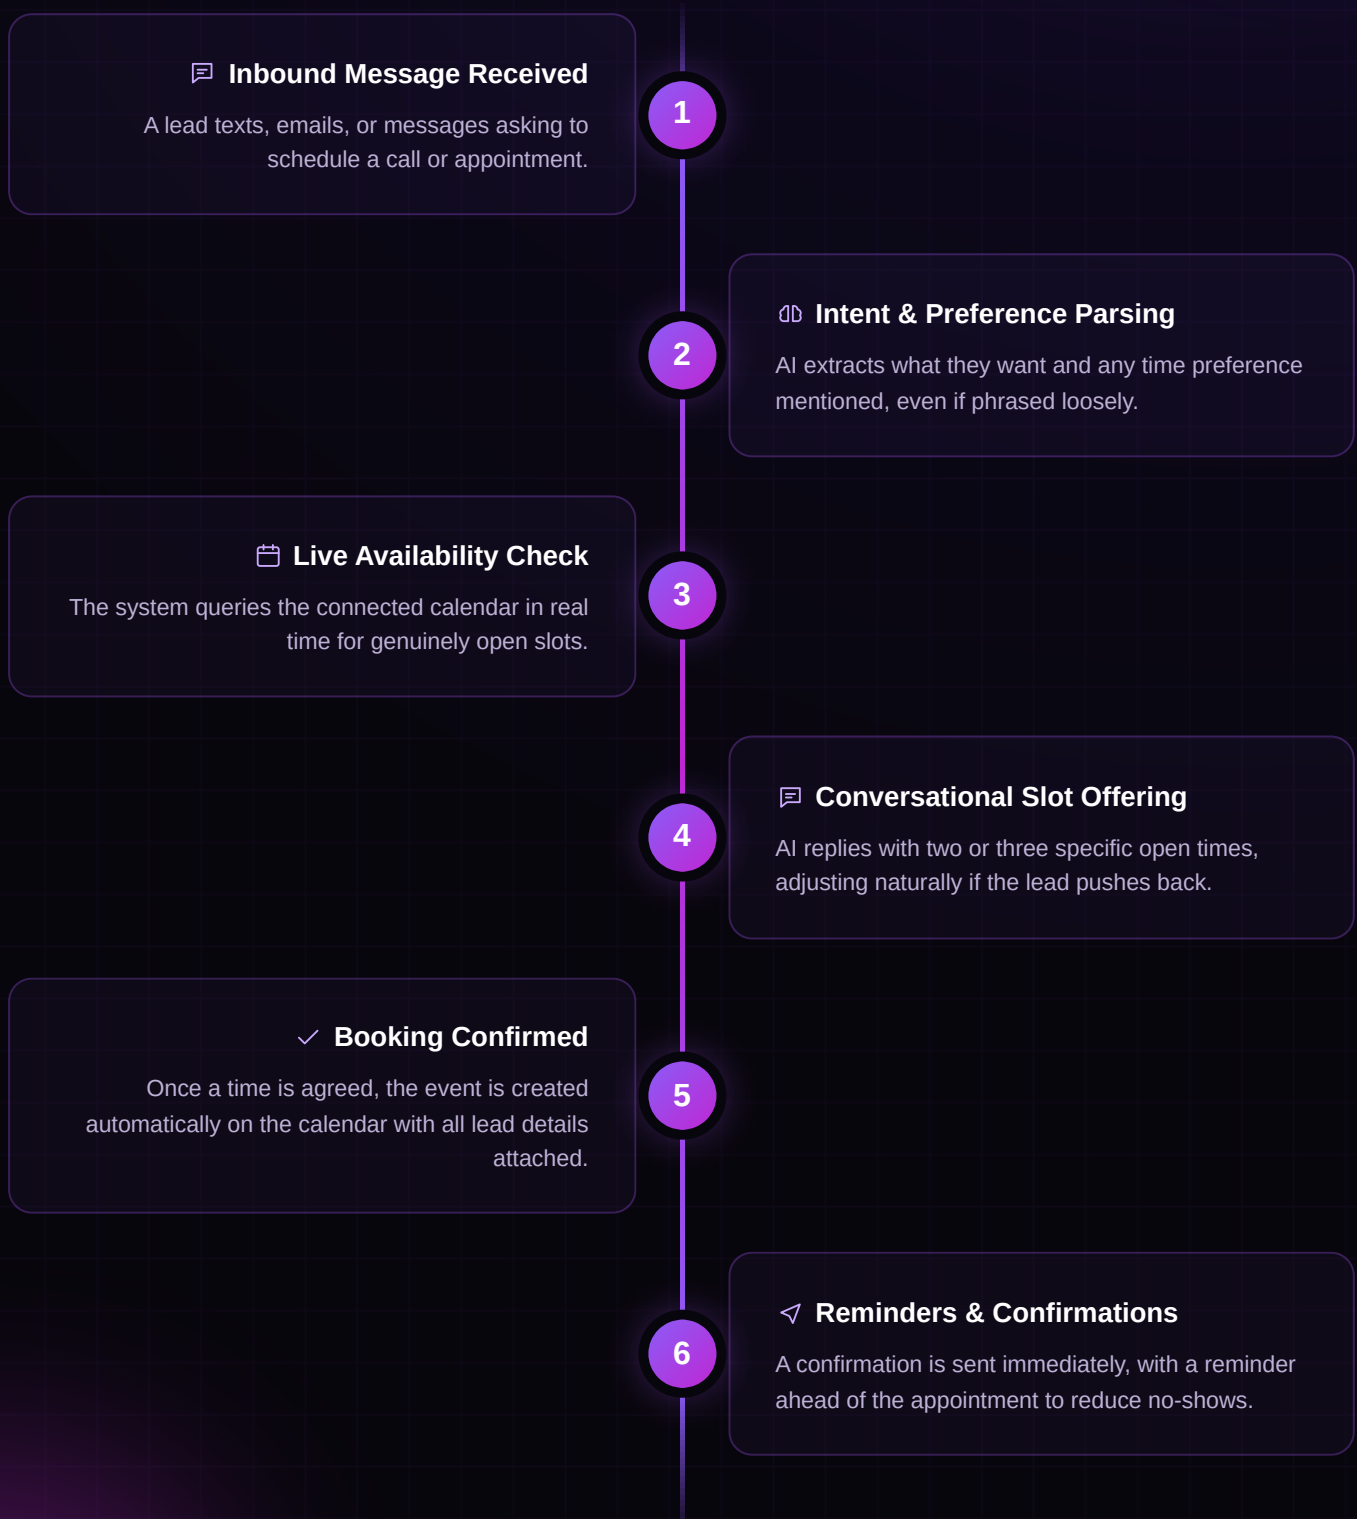

- AI chats with the lead in natural language to find a time that genuinely works
- Reads real-time calendar availability before offering any slot
- Books the appointment directly onto the calendar, with no manual entry
- Sends automatic confirmation and reminder messages to cut no-shows

Instead of a lead choosing from a static booking link, or worse, playing phone tag, they simply say when they're free in plain language, such as 'sometime Tuesday afternoon,' and the AI checks live calendar availability, proposes real open slots, confirms the choice, and creates the calendar event automatically. Confirmation and reminder messages are then sent on autopilot to keep no-shows low.

STEP-BY-STEP AUTOMATION FLOW

How It Works

A full scheduling conversation, handled start to finish, without a human touching a calendar.

THE INTELLIGENCE LAYER

Under the Hood

How the AI actually thinks, decides and acts inside this automation.

This automation combines conversational AI with real-time calendar read and write access. The AI isn't just generating text, it's given tool access to check free and busy blocks on the connected calendar, so every slot it offers is genuinely available, avoiding the common chatbot failure of proposing times that are already booked.

The conversation logic handles the messy reality of real scheduling: leads who say 'anytime after 3', who reschedule mid-conversation, or who ask a question before committing. The AI is instructed to stay on the scheduling task, answer brief related questions, and always drive toward a confirmed booking rather than leaving the thread open-ended.

TECH STACK

**n8n Workflow Engine**

Connects the chat, AI model and calendar together

**GPT Language Model**

Runs the natural scheduling conversation with the lead

**Google Calendar API**

Checks live availability and creates confirmed events

**Twilio / WhatsApp API**

Carries the two-way conversation over SMS or chat

**Reminder Scheduler**

Sends confirmation and pre-appointment reminder messages

INTEGRATES WITH

Google Calendar

Calendly

GoHighLevel

Twilio

WhatsApp

Outlook Calendar

WHY IT MATTERS

Key Benefits

Turning 'I'm interested' into a confirmed appointment on the spot.

**Books Appointments 24/7**

Leads can schedule at 11pm on a Sunday, no staff required.

**Zero Back-And-Forth**

One short conversation replaces five rounds of 'does this time work?'.

**Fewer No-Shows**

Automatic confirmations and reminders keep appointments top of mind.

**Frees Up Front Desk Time**

Staff stop spending hours a day coordinating calendars manually.

**Always Accurate Availability**

Live calendar checks mean no accidental double-bookings.

**More Booked Calls, Faster**

Instant scheduling captures interest before it fades.

REAL-WORLD EXAMPLE

A med-spa gets an Instagram DM at 9pm asking about consultation availability. The AI appointment setter replies within seconds, offers three open slots for the following week based on real calendar availability, confirms Thursday at 2pm, adds it to the clinic's calendar, and texts a reminder the morning of the appointment, all without a single staff member being involved.
